

suicide risk:

Documentation and decision-making for caring clinicians.

PRESENTER

Anthony R. Pisani, Ph.D.

University of Rochester

Center for the Study and Prevention of Suicide

Wynne Center for the Family

WORKSHOP FEATURES

- Three hours of training geared toward diverse learning styles.
- Clinically useful handouts including visual concept maps and documentation examples.
- Service planning tool customized to meet needs of specific clinical setting.
- Experiential exercise in documenting risk for suicide.
- Recommendations relevant to daily challenges of clinical work.

Workshop Objectives

- Participants will identify the key evidence-based factors to consider in formulating and documenting risk for suicide.
- Participants will be able to identify options within the outpatient treatment plan for responding to risk for suicide in a new or existing patient.
- Given a clinical scenario, participants will use knowledge of risk factors to document an evidence-based risk assessment and formulation.

Anthony R. Pisani, Ph.D. is an Assistant Professor of Psychiatry and Pediatrics at the University of Rochester Medical Center and Rochester General Hospital. Dr. Pisani is a licensed clinical psychologist and licensed family therapist. He works with children, adults, couples, and families in primary and specialty mental health care settings.

Dr. Pisani's method for training clinicians about suicide risk grew out of clinical experiences with challenging patients. He is a dynamic speaker who enriches the curriculum with detailed clinical examples. Dr. Pisani enjoys working with interdisciplinary groups, and has experience training professionals from a range of disciplines and theoretical paradigms. (More info at <http://commitmenttoliving.com>)
